About the Pew Hispanic Center

The Pew Hispanic Center is a nonpartisan research organization that seeks to improve public understanding of the diverse Hispanic population in the United States and to chronicle Latinos' growing impact on the nation. It does not take positions on policy issues. The Center is part of the Pew Research Center, a nonpartisan "fact tank" based in Washington, D.C., and it is funded by The Pew Charitable Trusts, a Philadelphia-based public charity. All of the Center's reports are available at www.pewhispanic.org.

The staff of the Pew Hispanic Center is:

Paul Taylor, Director

Rakesh Kochhar, Associate Director for Research

Richard Fry, Senior Research Associate

Gretchen Livingston, Senior Researcher

Seth Motel, Research Assistant

Mary Seaborn, Administrative Manager

Mark Hugo Lopez, Associate Director

Jeffrey S. Passel, Senior Demographer

Ana Gonzalez-Barrera, Research Associate

Eileen Patten, Research Assistant

Antonio Rodriguez, Intern

About this Report

This report is based on estimates of public school enrollment and college enrollment from the October Current Population Survey (CPS). The CPS is the standard source for national estimates of *rates* of college and public school enrollment and has collected enrollment information in a consistent manner since 1947. The 2011 estimates are based on Pew Hispanic Center tabulations of the recently released October 2011 CPS data. Estimates for prior years are from the historical school enrollment tables available on the U.S. Census Bureau website: <http://www.census.gov/hhes/school/data/cps/historical/index.html>.

This report provides enrollment figures by race and ethnicity. For college enrollments, the Census Bureau's historical college enrollment tables by race and ethnicity are limited to the 18- to 24-year-old population. References to trends in college enrollment are for that age group.

The CPS is nationally representative of the civilian non-institutionalized population. For many groups, estimated educational attainment levels and school enrollment do not significantly diverge whether based on the civilian non-institutionalized population or the total resident population. However, for the young black population, particularly young black males, estimates of high school completion, dropping out and college enrollment may be sensitive to the sample universe ([Heckman and LaFontaine, 2007](#)).

This report also provides data on the number of college degrees conferred by two-year and four-year degree-granting institutions on students of all ages. These data come from the U.S. Department of Education's "Digest of Education Statistics, 2011" ([Snyder and Dillow, 2012](#)).

This report was written by Richard Fry and Mark Hugo Lopez. Paul Taylor provided comments. The authors thank Paul Taylor for editorial guidance. Seth Motel and Eileen Patten provided research assistance. Motel number-checked the report. Molly Rohal was the copy editor.

1. Overview

The nation's Hispanic¹ student population reached a number of milestones in 2011, according to an analysis of newly available U.S. Census Bureau data by the Pew Hispanic Center, a project of the Pew Research Center.

For the first time, the number of 18- to 24-year-old Hispanics enrolled in college exceeded 2 million and reached a record 16.5% share of all college enrollments.² Hispanics are the largest minority group on the nation's college campuses, a milestone first achieved last year ([Fry, 2011](#)). But as their growth among all college-age students continues to outpace other groups, Hispanics are now, for the first time, the largest minority group among the nation's four-year college and university students. And for the first time, Hispanics made up one-quarter (25.2%) of 18- to 24-year-old students enrolled in two-year colleges.

In the nation's public schools, Hispanics also reached new milestones. For the first time, one-in-four (24.7%) public elementary school students were Hispanic, following similar milestones reached recently by Hispanics among public kindergarten students (in 2007) and public nursery school students (in 2006). Among all pre-K through 12th grade public school students, a record 23.9% were Hispanic in 2011.

Figure 1.1

Hispanic Share of Pre-K through 12th Grade Public School Enrollment and 18- to 24-Year-Old College Enrollment, 1972-2011

Notes: "Pre-K through 12th grade public school enrollment, ages 3 and older" shows the Hispanic share of enrollment in public schools from pre-K through 12th grade. Public school enrollment figures for 1980 are not available. "College enrollment, ages 18-24" shows Hispanic share among college students ages 18 to 24.

Source: Pew Hispanic Center analysis of the October and March Current Population Surveys (CPS)

PEW RESEARCH CENTER

¹ The terms "Latino" and "Hispanic" are used interchangeably in this report.

² College enrollment refers to persons enrolled in a two-year college or a four-year college or university and includes both undergraduate and graduate students. The population of 18- to 24-year-old college students includes those enrolled at private and public colleges and universities.

The new milestones reflect a number of continuing upward trends. Between 1972 and 2011, the Latino share of 18- to 24-year-old college students steadily grew—rising from 2.9% to 16.5%. During the same period, among all public school students, the Latino share grew from 6.0% to 23.9%. In both cases, rapid Latino population growth has played a role in driving Latino student enrollment gains over the past four decades.

However, population growth alone does not explain all the enrollment gains made by Hispanic students in recent years ([Fry, 2011](#)). Today, with the high school completion rate among young Hispanics at a new high, more young Hispanics than ever are eligible to attend college. According to the Pew Hispanic analysis, 76.3% of all Hispanics ages 18 to 24 had a high school diploma or a General Educational Development (GED) degree in 2011, up from 72.8% in 2010. And among these high school completers, a record share—nearly half (45.6%)—is enrolled in two-year or four-year colleges. Both demographic trends and greater eligibility have contributed to growth in the number of Hispanic young people enrolled in college in recent years.

In addition to gains in enrollment, the number of degrees conferred on Latino college students has also reached new highs.³ In 2010, the number of Latinos who received a bachelor's degree reached a record 140,000 recipients, according to data published by the National Center for Education Statistics of the U.S. Department of Education ([Snyder and Dillow, 2012](#)). A record number of associate degrees were awarded to Latinos in 2010 as well—112,000. In both cases, Latinos are a growing share of all degree recipients—13.2% among those with an associate degree and 8.5% among those who received a bachelor's degree in 2010. Despite these gains, the Latino share among degree recipients significantly lagged their share among 18- to 24-year-old students enrolled in two-year colleges (21.7%) and four-year colleges and universities (11.7%) in 2010.

Hispanics are the nation's largest minority group, making up more than 50 million people, or about 16.5% of the U.S. population. Among the 30 million young people ages 18 to 24, 6 million, or 20%, are Hispanics.

³ The U.S. Department of Education reports the number of degrees conferred on graduates of all ages. While the majority is likely between ages 18 and 24, many graduates will be over age 24 and some may be under age 18.

2. Hispanic Public School Enrollments

Newly available data indicate that the nation's Hispanic student population continues to grow. More than 12.4 million Hispanics were enrolled in the nation's public schools pre-K through 12th grade in October 2011, according to a Pew Hispanic Center analysis of U.S. Census Bureau data. Overall, Hispanic students make up nearly one-quarter (23.9%) of the nation's public school enrollment, up from one-fifth (19.9%) in 2005 and 16.7% in 2000.

Growth in the share of Hispanics among all public school students reflects growth in their share among younger public school students. In 2011, for the first time, one-quarter (25%) of public elementary school children were Hispanic. This follows on the heels of other Hispanic student population milestones. In 2007, more than 25% of all kindergarten students were Hispanic for the first time, and in 2006 Hispanics reached the one-quarter milestone among all nursery school students.⁴

In 2011, Hispanics made up 21% of all public high school student enrollments. As students in nursery school progress through kindergarten and into elementary school and high school, Hispanic students will make up a rising share of public high school students and all public school students in coming years.

According to the U.S. Census Bureau, by 2036 Hispanics are projected to compose one-third of the nation's children ages 3 to 17 ([U.S. Census Bureau, 2008](#)).

Figure 2.1
Racial and Ethnic Composition of Public School Enrollment, October 2011
(%)

Notes: The figures above refer to the white- and black-alone populations. White, black and other include only the non-Hispanic portions of those groups.

Source: Pew Hispanic Center analysis of the October 2011 Current Population Survey

PEW RESEARCH CENTER

⁴ Hispanic children made up 26% of public nursery school enrollments in October 2011. However, Hispanic children are less likely to enroll in nursery schools overall than other children. In October 2011, Hispanic children were only 20% of all nursery school enrollments at both private and public schools.

3. Hispanic College Enrollments

Hispanics Continue to Lead Growth in College Enrollments

The ranks of the nation's young college students continue to grow. In October 2011, 18- to 24-year-old college enrollment reached a record 12.6 million students, up 3% from 2010.

Growth in the number of young Hispanics attending college accounted for the majority of the increase. Between 2010 and 2011, the number of young Hispanics enrolled in college grew by 15%, or 265,000 students, to 2.1 million.

This increase follows on the heels of a 24% increase in Hispanic college enrollments between 2009 to 2010 ([Fry, 2011](#)). Alone, Hispanic college enrollment growth accounted for nearly three-quarters (74%) of the growth in college student enrollments over the last year.

The white non-Hispanic student population also grew between 2010 and 2011, increasing by 219,000 students, or 3%, to 7.9 million. Meanwhile, the number of blacks enrolled in college and the number of Asians enrolled in college fell, by 3% and 8% respectively between 2010 and 2011.

With fast growth in the Hispanic college student population, Hispanics now make up 16.5% of the nation's 18- to 24-year-old college students. As recently as October 2006, Hispanics were only 11% of all college students. In just five years, their share has grown by almost 50%. This is a significant milestone because for the first time Hispanic representation among the nation's traditional college student population matched Hispanics' overall population representation, also at 16.5%.⁵ Even so, the Hispanics share among college students continues to lag their share (20.0%) among all young people ages 18 to 24.

Table 3.1

College Enrollment of 18- to 24-Year-Olds, 2010-2011
(in thousands)

	2010	2011	Change	Percentage Change
All	12,213	12,570	357	3%
Hispanic	1,814	2,079	265	15%
White	7,663	7,882	219	3%
Black	1,692	1,639	-53	-3%
Asian	811	748	-63	-8%

Notes: "White" includes only non-Hispanic whites. The figures above refer to the white-, black- and Asian-alone populations. College enrollment refers to persons enrolled in a two-year college or a four-year college or university. It also includes those enrolled at private and public colleges and universities.

Source: Pew Hispanic Center analysis of the October 2010 and 2011 Current Population Surveys

PEW RESEARCH CENTER

⁵ In the 2010 Census, Hispanics were 16.3% of the nation's total population ([Passel, Cohn and Lopez, 2011](#)). However, the college enrollment figures shown in this report are based on the U.S. Census Bureau's Current Population Survey (CPS). The

Hispanics Now Largest Minority Group at Four-Year Colleges

Among 18- to 24-year-olds, Hispanic enrollment at four-year colleges and universities increased 20% from October 2010 (1.0 million) to October 2011 (1.2 million). For the first time, young Hispanic enrollments on four-year campuses exceeded young black enrollments (1.1 million), making Hispanics the largest minority group at four-year colleges and universities. In 2011, Hispanics were 13.1% of all 18- to 24- year olds enrolled at four-year colleges and universities.

This follows a similar change since 2010 among students enrolled at two-year college campuses. Then, the number of Hispanic young people enrolled in two-year colleges was 835,000, higher than the 630,000 black students enrolled at two-year colleges (Fry, 2011). Since then, the number of Hispanics enrolled at two-year colleges has continued to grow. In 2011, some 908,000 Hispanics and 564,000 blacks ages 18 to 24 were enrolled in two-year colleges. In 2011, Hispanics made up one-quarter (25.2%) of all 18- to 24- year old students enrolled in two-year colleges for the first time.

Figure 3.1
18- to 24-Year-Old Enrollment in Four-Year Colleges, 2010-2011
(millions)

Notes: "White" includes only non-Hispanic whites. The figures above refer to the white-, black- and Asian-alone populations.

Source: Pew Hispanic Center analysis of the October 2010 and 2011 Current Population Survey (CPS)

PEW RESEARCH CENTER

population universe for the CPS is the civilian, non-institutionalized population. In the October 2011 CPS, Hispanics made up 16.5% of the civilian, non-institutionalized population.

Population Growth and Eligibility Key Reasons for Growth in Hispanic College Enrollments

Some of the growth in Hispanic college enrollments simply reflects continued growth in the nation's Hispanic population—since 1972, the number of Hispanic 18- to 24-year-olds has grown nearly five-fold, rising from 1.3 million then to 6.0 million in 2011.

However, population growth alone does not explain enrollment gains among Hispanics.

According to Pew Hispanic estimates, a record share of young Hispanics is eligible to attend college. In 2011, 76% of Hispanics ages 18 to 24 had finished high school, the highest level of Hispanic high school completion ever attained and a three-percentage-point increase over the 2010 level (73%). This record-high level of Hispanic high school completion is consistent with the recently noted strong gains in the Hispanic high school graduation rate at the nation's public schools reported by *Education Week* (Swanson, 2012).⁶

Figure 3.2
Hispanic High School Completion Among 18- to 24-Year-Olds (%)

Note: High school completers are people who have completed at least four years of high school, for 1972 to 1991. Beginning in 1992, they are people who have attained at least a high school diploma (including equivalency).

Source: Pew Hispanic Center analysis of the October Current Population Survey (CPS)

PEW RESEARCH CENTER

⁶ The high school completion rate measure used in this report is the proportion of an age group that has completed high school by either graduating with a high school diploma or completing a GED. It does not gauge whether high school was completed on time. In the *Education Week* report, a different high school graduation rate measure is used. This measure uses U.S. Department of Education data and aims to measure the percentage of public high school students who graduate on time with a diploma.

College-going among young Hispanic high school completers also reached a record level in October 2011. Nearly half (46%) were enrolled in college, eclipsing the share (45%) of black high school completers enrolled in college. By comparison, 51% of white high school completers and 67% of Asian high school completers were enrolled in college.

Figure 3.3

College Enrollment Rates of Whites, Blacks and Hispanics

(% of 18- to 24-year-old high school completers)

Notes: "White" includes only non-Hispanic whites. Starting in 2003, respondents could identify more than one race. The figures for 2003 onward refer to the white-, black- and Asian-alone populations. The data shown prior to 2003 consists of those identifying themselves as "Asian or Pacific Islanders."

Source: Pew Hispanic Center analysis of the October Current Population Survey (CPS)

PEW RESEARCH CENTER

4. College Graduation and Hispanics

Over the past four decades, the number of Hispanics graduating with either an associate or a bachelor's degree has increased seven-fold, with growth outpacing that of other groups. As a result, not only has the number of Hispanic degree recipients grown, so too has their share of all college degree recipients. Even so, the number of Hispanics awarded college degrees lags that of other groups, and their share of college graduates remains below that of all college student enrollments.

In 2010, the number of degrees conferred on Hispanics of all ages reached record levels. According to the U.S. Department of Education's National Center for Education Statistics ([Snyder and Dillow, 2012](#)), 112,000 Hispanics received an associate degree and 140,000 Hispanics were awarded a bachelor's degree—both new highs.⁷

Despite a record number of degrees conferred on Hispanic college students, they continue to lag other groups. In 2010, 1.2 million bachelor's degrees were awarded to non-Hispanic white students and 165,000 to non-Hispanic black students. Overall, some 1.7 million bachelor's degrees were awarded in 2010.

Figure 4.1

Number of Hispanics Earning Associate and Bachelor's Degrees, 1977-2010

(thousands)

Notes: 1997 and 1981 data excludes some cases for which race/ethnicity was not available. Degree-granting institutions are those that grant associate or higher degrees and participate in Title IV federal financial aid programs.

Source: Tables 297 and 300 in U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics, 2011"

PEW RESEARCH CENTER

⁷ The number of associate and bachelor's degrees conferred as reported by the U.S. Department of Education reflect all degrees awarded to graduates of all ages, not just those of traditional college age (ages 18 to 24 years).

At the associate level, the number of degrees awarded to Hispanics trailed that of non-Hispanic whites (553,000), but nearly matched the number awarded to non-Hispanic blacks (114,000).

The Hispanic share among degree recipients from two-year and four-year colleges has also reached a record. In 2010, 8.5% of all bachelor's recipients were Hispanic, up from 8.1% in 2009. Among all associate degree recipients, 13.2% were Hispanic, also a record.

While the number of Hispanics receiving a college degree has grown, the number of degrees conferred on Hispanics trails other groups. Among the 1.7 million bachelor's degrees awarded in 2010, 71% were awarded to non-Hispanic whites, 10% to non-Hispanic blacks, and 7% to non-Hispanic Asian/Pacific Islanders.

Among associate degree recipients in 2010, the share of Hispanics matched that of non-Hispanic blacks—13%—and was more than double the 5% share of non-Hispanic Asian/Pacific Islanders. Two-thirds (65%) of the 849,000 associate degree recipients in 2010 were non-Hispanic white.

Figure 4.2

Degrees Conferred, by Race/Ethnicity, 2010

Notes: White, black, Asian and other includes only the non-Hispanic portions of those groups. Unlabeled slices include non-Hispanic American Indians/Alaska Natives and non-resident aliens. Percentages may not sum to 100% due to rounding. Degree-granting institutions grant associate or higher degrees and participate in Title IV federal financial aid programs.

Notes: Includes the civilian non-institutionalized population. Starting in 2003, respondents could identify more than one race. "r" denotes revised, controlled to 1990 Census based population estimates; previous 1993 data controlled to 1980 Census-based population estimates. Prior to 1994, total enrolled does not include the 35 and over population. High school completers are people who have completed at least four years of high school for 1967 to 1991. Beginning in 1992, they are people who have attained at least a high school diploma (including equivalency).

Notes: Includes the civilian non-institutionalized population. "r" denotes revised, controlled to 1990 Census based population estimates; previous 1993 data controlled to 1980 Census-based population estimates. High school completers are people who have completed at least four years of high school for 1972 to 1991. Beginning in 1992, they are people who have attained at least a high school diploma (including equivalency).
